Die Bücherdiebin Markus Zusak 2008-12-04 »Die Bücherdiebin« ist ein modernern Klassiker und Weltbestseller und wurde 2014 erfolgreich verfilmt. Molching bei München. Hans und Rosa Hubermann nehmen die kleine Liesel Meminger bei sich auf – für eine bescheidene Beihilfe, die ihnen die ersten Kriegsjahre kaum erträglicher macht. Für Liesel jedoch bricht eine Zeit voller Hoffnung, voll schieren Glücks an – in dem Augenblick, als sie zu stehlen beginnt. Anfangs ist es nur ein Buch, das im Schnee liegen geblieben ist. Dann eines, das sie aus dem Feuer rettet. Dann Äpfel, Kartoffeln und Zwiebeln. Das Herz von Rudi. Die Herzen von Hans und Rosa Hubermann. Das Herz von Max. Und das des Todes. Denn selbst der Tod hat ein Herz. Eine unvergessliche Geschichte vom dunkelsten und doch brilliantesten aller Erzähler: dem Tod. Tragisch und witzige, zugleich wütend und zutiefst lebensbejahend – ein Meisterwerk.

Redox and Nitrosative Signaling in Cardiovascular System: from Physiological Response to Disease Mariarosaria Santillo 2019-01-22 The role of ROS/RNS signaling in cardiovascular functions and diseases is increasingly emerging in the last decades. The involvement of ROS/RNS in the control of a large number of cardiovascular functions like the regulation of the vascular tone, the control of blood pressure or myocyte excitation-contraction coupling and force development has been broadly investigated and in part clarified. On the other hand, many efforts have been focused in clarifying the redox mechanisms involved in cardiovascular diseases like ischemia/reperfusion injury, diabetes-associated cardiovascular dysfunctions, atherosclerosis or hypertension, just to mention the major ones. However, in most cases the two levels of investigation remain separate and not interlaced, failing in the attempt to provide a unified vision of the pathophysiological mechanisms of cardiovascular diseases. The major aim of the Research Topic has been to collect original papers and review articles dealing with the issue from basic to translation research point of views. The topic includes contributions that highlight different interesting aspects of cardiovascular biology with an integrated approach useful for the development of new ideas and advancements in the field of redox signaling in the control of normal cardiovascular functions and their disruption in diseases.

Reproductive and Developmental Toxicology Ramesh C. Gupta 2011-04-04 Reproductive toxicology is a complex subject dealing with three components—parent, placenta, and fetus—and the continuous changes that occur in each. Reproductive and Developmental Toxicology is a comprehensive and authoritative resource providing the latest literature enriched with relevant references describing every aspect of this area of science. It addresses a broad range of topics including nanoparticles and radiation, gases and solvents, smoking, alcohol and drugs of abuse, food additives, nutraceuticals and pharmaceuticals, and metals, among others. With a special focus on placental toxicity, this book is the only available reference to connect the three key risk stages, and is the only resource to include reproductive and developmental toxicity in domestic animals, fish, and wildlife. Provides a complete, integrated source of information on the key risk stages during reproduction and development Includes coverage of emerging science such as stem cell application, toxicoproteomics, metabolomics, phthalates, infertility, teratogenicity, endocrine disruption, surveillance and regulatory considerations, and risk assessment Offers diverse and unique in vitro and in vivo toxicity models for reproductive and developmental toxicity testing in a user-friendly format that assists in comparative analysis

Hearing and Sound Communication in Amphibians Peter M. Narins 2006-12-11 This book is a compendium of the latest research on acoustic communication in these highly vocal vertebrates. The chapters are written by experts currently investigating the physiology and behavior of amphibians, in the laboratory and in the field. This integrated approach provides a neuroethologically-driven and evolutionary basis for our understanding of acoustic communication and its underlying mechanisms. The intended audience includes senior undergraduates, physiologists, zoologists, evolutionary biologists and communication specialists. Dissertation Abstracts International 2006

Defending Standardized Testing Richard Phelps 2005-03-23 The education reform movement of the past two decades has focused on raising academic standards. Some standards advocates attach a testing mechanism to gauge the extent to which high standards are actually accomplished, whereas some critics accuse the push for standards and testing of impeding reform and perpetuating inequality. At the same time, the testing profession has produced advances in the format, accuracy, dependability, and utility of tests. Never before has obtaining such an abundance of accurate and useful information about student learning been possible. Meanwhile, the American public remains steadfast in support of testing to measure student performance and monitor the performance of educational systems. Many educational testing experts who acknowledge the benefits of testing also believe that those benefits have been insufficiently articulated. Although much has been written on standardized testing policy, most of the material has been written by opponents. The contributing authors of this volume are both accomplished researchers and practitioners who are respected and admired worldwide. They bring to the project an abundance of experience working with standardized tests. The goal of *Defending Standardized Testing* is to: *describe current standardized testing policies and strategies; *explain many of the common criticisms of standardized testing; *document the public support for, and the realized benefits of, standardized testing; *acknowledge the limitations of, and suggest improvements to, testing practices; *provide guidance for structuring and administering large-scale testing programs in light of public preferences and the "No Child Left Behind Act" requirements; and *present a defense of standardized testing and a vision for its future. *Defending Standardized Testing* minimizes the use of technical jargon so as to appeal to all who have a stake in American educational reform.

Especially ion channels and transporters have been demonstrated to represent prominent molecular targets for those gases and are thus key factors in gas-induced cell-signalling. This Research Topic will focus on the interaction of gaseous molecules with ion channels/transporters and will address the following questions: i) Which ion channels/transporters are regulated by gases? ii) How are ion channels/transporters mechanistically regulated by gases? iii) What are cellular and physiological processes, which are triggered by the interaction of gases with ion channels/transporters?
