Psychology: Concepts and Applications Jeffrey S. Nevid 2012-01-01 PSYCHOLOGY: CONCEPTS AND APPLICATIONS, Fourth Edition, offers a concept-based approach supported by a unique pedagogical framework. Author Jeff Nevid provides a broad view of psychology that includes history, major theories, research methods, and important research findings as well as applications of contemporary research to the problems and challenges faced in everyday life. Nevid developed the effective teaching devices in this text based on a comprehensive system derived from research on learning and memory as well as his own research on textbook pedagogy. The text's successful modular format organizes each chapter into manageable instructional units that help students focus on one topic at a time within the context of a larger chapter structure. The material also incorporates four goals that Nevid refers to as the Four E's of Effective Learning: Engaging Student Interest, Encoding Information, Elaborating Meaning, and Evaluating Progress. In the Fourth Edition, Nevid employs a new IDEA Model of Course Assessment--unique to this text--which maps specific learning goals (tied to APA goals) to measurable skills students acquire in their first exposure to psychology. Executed throughout each chapter, the model presents learning objectives that are expressed in the form of active learning verbs, and linked to measurable learning outcomes. The model is integrated with the test-item file, making it easy for instructors to select items measuring these particular outcomes.
