Alex im Wunderland der Zahlen Alex Bellos 2015-01-19

Erinnern wir uns nicht alle mit Schrecken an die ratlosen Momente vor der Tafel im Matheunterricht? Mit

Kurvendiskussionen und Dreisatz dürften jedenfalls nur wenige Spaß und Spannung verbinden... Bis jetzt! Denn

nun wagt sich Alex Bellos in den Kaninchenbau der

Mathematik: in das Reich von Geometrie und Algebra,

von Wahrscheinlichkeitsrechnung, Statistik und logischen Paradoxa. Auf der anderen Seite des Erdballs, am

Amazonas, zählen die Mitglieder des Indianerstammes der Munduruku nur bis fünf und halten die Vorstellung,

dass dies nicht genügen sollte, für reichlich lächerlich. Bei uns in Deutschland dagegen finden jährlich die Meisterschaften der besten Kopfrechner der Welt statt - 2010 wurde in Magdeburg eine elfjährige Inderin zur Nummer eins unter den "Mathleten" gekürt. Die Mathe-Weltmeisterin unter den Tieren ist hingegen die Schimpansin Ai, die Alex Bellos im japanischen Inuyama aufspürt und über deren Rechenkünste er nur staunen kann. Auch wenn er von den bahnbrechenden Überlegungen Euklids erzählt oder erklärt, warum man in Japan seine Visitenkarten keinesfalls zu Dodekaedern falten sollte - Bellos führt uns durch das wahrhaft erstaunliche Reich der Zahlen und bringt uns eine komplexe Wissenschaft spielerisch nahe. Mit seiner Mischung aus spannender Reportage, Wissenschaftsgeschichte und mathematischen Kabinettstückchen erbringt er souverän den Beweis, dass die Gleichung $\text{Mathematik} = \text{Langeweile}$ eindeutig nicht wahr ist. Quod erat demonstrandum.

Nanomaterials-Based Composites for Energy Applications
Keka Talukdar 2020-01-13 This volume, *Nanomaterials-Based Composites for Energy Applications: Emerging Technology and Trends*, covers the importance of nanomaterials-based composites for renewable and alternative energy applications. Taking a multidisciplinary approach, it looks at using composites without losing the extraordinary strength of the nanomaterials, preparing new composites with high dielectric permittivity, improving load-carrying capacity, and more. Simulation and experimental work is included, providing a current view of the research that is going on in laboratories all over the

world. The book will be a rich reference for professors and instructors, professionals, researchers, and engineering students interested in applying the emerging field of nanoscience and nanotechnology to energy applications.

Student Success in Community Colleges Deborah J. Boroch 2010-02-22 Student Success in Community Colleges As more and more underprepared students enroll in college, basic skills education is an increasing concern for all higher education institutions. Student Success in Community Colleges offers education leaders, administrators, faculty, and staff an essential resource for helping these students succeed and advance in college. By applying the book's self-assessment instrument, colleges can pinpoint how their current activities align with the most effective proven practices. Once the gaps are identified, community college leaders can determine the best strategic direction for improvement. Drawing on a broad knowledge base and illustrative examples from the most current literature, the authors cover organizational, administrative, and instructional practices; program components; student support services and strategies; and professional learning and development. Designed to help

engage community college leadership and practitioners in addressing the practices, structures, and obstacles that enhance or impede the success of basic skills students, the book's strategies can be tailored to various institutional levels, showing how to unite faculty, staff, and administrators in a cooperative effort to effect institutional change. Finally, *Student Success in Community Colleges* reveals how investing in a comprehensive basic skills infrastructure can be a financially sustainable model for the institution as well as substantially beneficial to students and society. "This is a most unusual and valuable book; it is packed with careful analysis and practical suggestions for improving basic skills programs in community colleges. Compiled by a team of practicing professionals in teaching, administration, and research, it is knowledgeable about what has been done and imaginative and practical about what can be done to improve the access and success of community college students."—K. Patricia Cross, professor of higher education, emerita, University of California, Berkeley "For its first hundred years the community college was committed primarily to access; in its second hundred years the commitment has changed dramatically to success. This book provides the best road map to date on how community colleges can reach that goal."—Terry O'Banion, president emeritus, League for Innovation, and director, Community College Leadership Program, Walden University "This guide is the most comprehensive source of information about all facets of basic skills or developmental education. It will be invaluable not just to community college educators across the nation, but also

to those in high schools and four-year colleges who share similar problems."—W. Norton Grubb, David Gardner Chair in Higher Education, University of California, Berkeley
