The SIM Guide to Enterprise Architecture Leon Kappelman 2011-06-03 Enterprise architecture is leading IT's way to the executive boardroom, as CIOs are now taking their place at the management table. Organizations investing their time, money, and talent in enterprise architecture (EA) have realized significant process improvement and competitive advantage. However, as these organizations discovered, it is one thing to acquire a game-changing technology but quite another to discover ways to use it well. A project of the Society for Information Management's Enterprise Architecture Working Group and edited by Leon A. Kappelman, The SIM Guide to Enterprise Architecture provides insights from leading authorities on EA, including John Zachman, Larry DeBoever, George Paras, Jeanne Ross, and Randy Hite. The book supplies a solid understanding of key concepts for effectively leveraging EA to redesign business processes, integrate services, and become an Information Age enterprise. Beginning with a look at current theory and frameworks, the book discusses the practical application of enterprise architecture and includes a wealth of best practices, resources, and references. It contains the SIM survey of IT organizations' EA activities, which provides important metrics for evaluating progress and success. Successful businesses exploit synergy among business functions and push the boundaries of process design. IT's cross-functional position uniquely qualifies it to lead process innovation. EA lets CIOs integrate technology with business vision and is the roadmap for implementing new systems, changing behavior, and driving value. This book explores the vision, foundation, and enabling technology required to successfully transform organizations with enterprise architecture.

Introduction to Air Law Pablo Mendes de Leon 2022-08-11 The world of aviation has moved on rapidly since the appearance of the ninth edition of this pre-eminent resource five years ago. Those developments pertain to market access and market behaviour by air carriers, including competition, new perceptions of safety and security, among others, in relation to transparency of accident investigation and cybersecurity, case law in the area of airline liability, with new cases from the United States, product liability and insurance, the United Kingdom, and elsewhere, the growing importance of environmental concerns, the rights and obligations of passengers, also in the context of 'unruly' passengers, and innovative methods for financing aircraft. Special attention has been paid in this edition to regional integration movements, especially in Europe, affecting the mentioned subjects. The book's extensive references to other sources in the field have been expanded and updated by the author and experts in specialised areas. The present edition addresses the following topics: the regulatory framework governing the operation of air services, including the principle of sovereignty in national airspace; the distinction between State and civil aircraft; dispute settlement in international civil aviation; economic regulation of international air transport services, including the establishment of air services agreements; inter-airline cooperation in the context of competition law regimes; liability of the various service providers, in particular airlines, and related insurance coverage; the promotion of safety standards; criminal acts affecting the safety of aviation; the role of international and regional organisations with particular reference to that of the European Union; liability of the aircraft manufacturer for equipment; and financial and security interests in mobile equipment. The many practitioners, officials, business people, and academics with a professional interest in aviation law will appreciate this new edition as one of the fundamental works in the field, and newcomers will discover an incomparable resource. This eleventh edition is ready to be of unmatched service to any practising member of the air law community anywhere in the world.

Injury Epidemiology: Fourth edition Leon S. Robertson, Ph.D. 2015 Research on injuries is a high priority to inform public policy that reduces deaths, hospitalizations and associated costs. Principles for research design and analysis of injury incidence and severity are emphasized. Review of extant surveillance data reveals numerous flaws that must be changed to increase usefulness of the data. Research designs of studies of injury causation and evaluation of countermeasures are often inappropriate and mislead analytic and injury control efforts. Appendices to chapters illustrate research projects that influenced public policy affecting the reduction of motor vehicle fatalities per population by half in the U.S. The principles illustrated by these studies can be applied to other types of injury.

Naturopathic Physical Medicine Leon Chaitow 2008 NATUROPATHIC PHYSICAL MEDICINE provides a philosophical naturopathic perspective, as well as practical clinical applications, for manual and physical approaches to health care. A wide range of bodywork and movement approaches and modalities are evaluated in relation to their ability to be appropriately used in naturopathic treatment and rehabilitation settings. The model of care emphasised in this text recognizes that naturopathically oriented therapeutic interventions usually focus on achieving one or all of the following: enhancement of function so that the person, system or part, can better self-regulate in response to adaptive demands; modification or removal of adaptive load factors; and symptomatic relief without creation of significant additional adaptive changes.
