Nursing Theories and Models Hugh McKenna 2006-09-07 Nursing theory is a major part of all nursing courses and nurses are encouraged to use theories in practice, but it is not always easy for the student to make a real connection between the two. Drawing on many years' experience of teaching and research, Hugh McKenna addresses the theory needs of both students and qualified staff. He demystifies the confusing terminology associated with nursing theory and shows how all nurses can build theory from practice through reflection and analysis. This text offers step-by-step guidelines on: * how to analyse concepts * how to generate and select theory * how to apply and test theory in practice. Written in a friendly, easy to read style, Nursing Theories and Models puts forward realistic strategies for bridging the theory-practice gap.

Nursing Theory, Postmodernism, Post-structuralism, and Foucault Olga Petrovskaya 2022-09-30 Nursing Theory, Postmodernism, Post-structuralism and Foucault critiques mainstream American nursing theory and its use of post-structural theory, comparing and contrasting how postmodern and post-structural ideas have been used fruitfully in nursing research and theorizing elsewhere. In the late 1980s, references to post-structuralism and Michel Foucault started to appear in nursing journals. Since then, hundreds of nursing publications have cited postmodernism and key post-structural ideas such as power/knowledge, discourse, and de-centering the human subject. In *Nursing Theory, Postmodernism, Post-structuralism and Foucault* Olga Petrovskaya argues that the application of these

ideas is markedly different in American nursing theory scholarship compared to nursing theoretical scholarship generated outside the canon of "unique" nursing theory. Analyzing relevant literature from the late 1980s through 2010s, she demonstrates this difference, arguing that American nursing theory calcified into a matrix of dogmas built on logical positivism, wary of "borrowed" theory, and loyal to a "unique nursing science." Post-structural ideas that fit the matrix such as criticism of medicine are sanctioned, whereas ideas skeptical of humanistic agendas including those that challenge American nursing theory are rendered meaningless. In contrast, other nurse scholars, from Britain, Australia, Canada, and what the author calls the American enclave group, engaged with postmodern and post-structural perspectives to enrich their research and invite readers to rethink nursing practice. The book showcases examples of their intelligent, creative theorizing. Arguing that American nursing theory enervated nursing theorizing, Petrovskaya calls for opening this matrix to theoretical and methodological creativity, less rigid categories of scholarship, and healthy self-examination. Making the case that post-structural ideas are vital for nurses' ability to critically reflect on their discipline and profession, this is a necessary read for all those interested in nursing theory, philosophy and praxis.

Self-Care Science, Nursing Theory and Evidence-Based Practice Katherine Renpenning, MScN 2011-05-20 "This is an excellent review of the development of self-care deficit theory and the use of self-care in nursing practice. Explanations of the various theories and theory terms are well done and written at a level that novice theorists can relate to. The authors demonstrate how self-care science can be fiscally and effectively applied to the care of patients/clients."--Doody's Medical Reviews Dorothea Orem's Self-Care Theory has been used as a foundation for nursing practice in healthcare institutions and as the basis of curricula in nursing schools for decades. This book explores the high-level theory of the application of Orem's Self-Care Theory, and how it can improve patient outcomes as well as cost-effectiveness of nursing care delivery. Written for nursing theorists, researchers, administrators, and graduate students, the text addresses the relationship of self-care theory and evidence-based care in nursing, and provides a solution to improving contemporary healthcare outcomes. The book is divided into three sections. Section one discusses the reason for the existence of the nursing profession, and identifies the performance of self-care. Section two covers three nursing practice sciences-wholly compensatory nursing, partly compensatory nursing, and supportive educative nursing. Section three offer suggestions on how health care organizations can incorporate this broadened perspective of what constitutes evidence based practice and on-going research methodology into every-day delivery of nursing services. Theoretical Nursing Afaf Ibrahim Meleis 2011 "An additional assumption was that the processes for theory development were new to nursing and hence, nurses in graduate programs learned strategies for advancing knowledge from other disciplines. This assumption was debunked with the knowledge that nurses were always engaged in knowledge development, driven by their experiences in clinical practice. Because of these assumptions, most of the early writing about theory development was about outlining strategies that should be used, rather than strategies that have already been used in the discipline to develop theories. Theorists themselves did not uncover or adequately discuss ways by which they developed their theories, therefore the tendency was to describe processes that were based on theories developed in other disciplines, mainly the physical and social sciences. And an implicit assumption was made that there should be a single strategy for theory development, some claiming to begin the process from practice, and others believing it should be driven by research"--Provided by publisher.
